

AI MARGIN PROTECTOR FOR SMALL MERCHANTS

Stop losing margin before stock hits the shelf.

Small retailers lose 3-5% of purchasing margin at receiving. ClaimBack monitors what suppliers promised, what was billed, and what arrived—and enforces recovery.

01 • PROMISED

WhatsApp & Deals

50 units @ ₹428

Agreed rate + 10+1 free scheme

02 • BILLED

Paper Invoice #3812

50 units @ ₹441

+₹13/box rate mismatch on bill

03 • RECEIVED

Store Floor Intake

48 arrived

2 missing units + 2 broken boxes

RECONCILED AUDIT RESULT

₹3,218 Leakage Detected & Verified

Short delivery (₹882) + Rate variance (₹598) + Missing free units (₹856) + Damage (₹882)

100% VERIFIED RECOVERY

ClaimBack

THE PROBLEM

Retailers run on 8-15% margin. Profit leaks at receiving.

Small merchants deal with dozens of distributors, chaotic deliveries, and paper bills with zero software audit.

SHORT DELIVERIES

₹882 Loss / delivery

Billed for 50, physically arrived 48

Distributor bills for full invoice quantity, but warehouse short-ships. Delivery driver promises 'kal bhej denge' which is never tracked.

Impact: Straight margin erosion · Subsidizing distributor errors

RATE MISMATCHES

₹598 Loss / delivery

Agreed ₹428 on WhatsApp, billed ₹441

Suppliers quote promotional rates over chat, but billing desks issue invoices at standard list price. Retailers unknowingly overpay.

Impact: Straight margin erosion · Subsidizing distributor errors

MISSING TRADE SCHEMES

₹856 Loss / delivery

Promised '10+1 free', zero bonus units sent

Trade promotions like 'buy 10 get 1 free' are agreed informally. Suppliers omit free boxes on the truck and pocket the difference.

Impact: Straight margin erosion · Subsidizing distributor errors

DAMAGED & EXPIRED GOODS

₹882 Loss / delivery

Crushed boxes unloaded without evidence

Merchants find leaking or dented products during shelf stocking. Without immediate itemized proof and photo timestamps, claims fail.

Impact: Straight margin erosion · Subsidizing distributor errors

THE 'NEXT BILL' TRAP THAT CAUSES 60% OF UNRECOVERED LOSSES

Suppliers casually say: 'Next invoice mein adjust kar denge'

Merchants lack ERP memory. By next week, paper receipts are lost and promised credits are NEVER verified or paid.

ClaimBack

THE SOLUTION

One Delivery. Three Truths.

ClaimBack reconstructs commercial reality by cross-examining three independent evidence streams.

TRUTH 1: PROMISED

WhatsApp & Agreements

Source

WhatsApp message from distributor rep

Agreed Rate

₹428 per unit (₹13 cheaper)

Scheme

Buy 10 boxes, get 1 free

Target Qty

50 boxes (entitled to 5 free boxes)

TRUTH 2: BILLED

Paper Invoice INV-3812

Source

Crinkled paper bill on truck delivery

Billed Rate

₹441 per unit (rate mismatch!)

Billed Qty

50 units billed @ ₹22,050 total

Free Units

0 free units billed or recorded

TRUTH 3: RECEIVED

Store Floor Intake

Source

Voice receipt / Physical box count

Arrived Qty

48 boxes physically delivered

Shortage

2 boxes missing from truck

Condition

2 boxes crushed & leaking

CLAIMBACK RECONCILIATION RESULT

Automated Evidence Packet: ₹3,218 Net Claim Generated

Traceable to source: Shortage (₹882) + Rate Variance (₹598) + Scheme Units (₹856) + Damaged Goods (₹882)

AWAITING APPROVAL

AI reads messy reality. Strict math calculates money.

LLMs hallucinate math. We split unstructured perception from deterministic financial calculations.

PERCEPTION LAYER (AI / LLMs)

Multimodal Vision & Indic Voice

Extracts noisy real-world merchant inputs without rigid forms.

OpenAI GPT-6.1 Vision

Reads crinkled, low-light paper receipts and handwritten challans

Sarvam Indic Speech

Understands colloquial Hindi & Hinglish voice receiving counts

Informal Scheme Parser

Extracts '10+1 free' and '5% cash discount' from WhatsApp chats

Zod Boundary Guardrails

Strict JSON schema validation prevents unstructured output drift

COMPUTATION LAYER (DETERMINISTIC)

100% Integer Paise Math Engine

Zero floating-point inaccuracies, zero financial hallucinations.

Integer Paise Representation

All money handled in paise (e.g. ₹260 = 26000). Never floats.

Deterministic Variance Engine

Exact math: $\text{billed_rate} - \text{promised_rate} * \text{delivered_units}$

Scheme Entitlement Algorithm

$\text{floor}(\text{paid} / \text{scheme_buy}) * \text{scheme_free} * \text{promised_rate}$

Auditable State Machine

Transitions governed by code (13 immutable case states), not LLM

CRITICAL MONEY RULE:

AI is NEVER allowed to compute the final recovery amount. Math is strictly deterministic.

ZERO PAISE DRIFT

ClaimBack

THE HERO DIFFERENTIATOR

A supplier promise is NOT recovery.

Generic chatbots close the ticket when the supplier replies. ClaimBack keeps the obligation open on ledger.

GENERIC AI BOT (BROKEN)

Ticket Closes on 'Next Bill' Reply

Day 1: Dispute Sent

Bot drafts and emails claim to supplier.

Day 2: Supplier Reply

Supplier replies: 'Shortage noted, next bill mein adjust karenge'

Day 2: Fatal Mistake

Bot sees positive sentiment, marks ticket 'RESOLVED' and closes!

Day 8: Next Invoice Arrives

Distributor forgets to deduct credit. No alert triggered.

FINAL OUTCOME

₹3,218 LOST FOREVER. Merchant pays full invoice again.

CLAIMBACK PERSISTENT MEMORY

Ledger Remains Open Until Verified

Day 1: Claim Created

Itemized claim packet generated with evidence links.

Day 2: Supplier Reply

Supplier replies: 'Next invoice mein adjust kar denge'

Day 2: Obligation Stored

Case stays OPEN (Awaiting Recovery). ₹3,218 owed on ledger.

Day 8: Next Invoice Arrives

Merchant scans next invoice / credit note. Engine auto-scans.

FINAL OUTCOME

Credit note verified matches ₹3,218. Case CLOSED. Money recovered!

PERSISTENT FINANCIAL OBLIGATION LEDGER

A promise creates a ledger debt. Only verified credits, replacement stock, or bank notes close the case.

Autonomous workflow. Merchant in total control.

ClaimBack handles all heavy paperwork, but enforces strict merchant authorization before claims are sent.

01

RECEIVE STOCK

Instant Capture

Snap photo of paper invoice, upload supplier WhatsApp deal, speak receiving count in Hindi or English.

Takes 30 seconds

02

RECONCILE

Instant Audit

Engine cross-examines 3 truths. Highlights rate differences, missing schemes, and damaged goods with source proof.

100% Deterministic

03

MERCHANT APPROVE

One-Tap Control

Merchant reviews professional evidence packet. Taps 'Approve & Send'. No claim sent without explicit merchant tap.

Zero AI Rogues

04

VERIFY RECOVERY

Memory Ledger

Follows up automatically. Reconciles next week's credit note or replacement. Closes only when balance is zero.

Closed-Loop

THE CLEAN DELIVERY RULE

Clean delivery? Delivery looks correct. No claim required.

When goods match the invoice and agreed schemes, ClaimBack celebrates clean performance. We never manufacture false claims.

Production-grade architecture. Built for scale.

A clean, unified full-stack architecture built with battle-tested modern tools.

FRONTEND & UI

Next.js App Router (React 19)

- **Framework:** Next.js 16 App Router + TypeScript (Strict)
- **Rendering:** Server Components by default (zero heavy client JS)
- **Design System:** Tailwind CSS + shadcn/ui (Radix primitives)
- **Interactions:** Motion for React (fluid, hardware-accelerated animations)

AI & REASONING

OpenAI GPT-6.1 & Codex

- **Multimodal OCR:** OpenAI GPT-6.1 (gpt-6.1-sol) for messy invoice parsing
- **Agent Loop:** Vercel AI SDK ToolLoopAgent with structured tool calling
- **Indic Voice:** Sarvam AI (saaras) for Hindi/Hinglish speech receiving
- **Guardrails:** Zod schema validation on all LLM inference boundaries

BACKEND & DATA

Supabase Postgres & Storage

- **Database:** PostgreSQL with strict Row-Level Security (RLS)
- **Multi-tenancy:** Isolated merchant accounts, stores, and claim records
- **Storage:** S3-compatible encrypted buckets for invoice photos & PDFs
- **Auth:** Supabase Auth with secure JWT session management

COMPUTATION ENGINE

Deterministic Integer Paise

- **Precision:** Integer paise calculations: zero floating-point drift
- **State Machine:** 13 strict operational states enforced by code
- **Testing:** Vitest test runner: 169 passing unit & integration tests
- **Evaluations:** 25 golden test scenarios evaluated against benchmarks

Architecture Rule: No microservices, no Kafka, no vector DB bloat. One clean, robust Next.js application.

ClaimBack

EVALUATION & RIGOR

Not a prototype mockup. 100% Tested & Verified.

Every business rule, money math calculation, and edge case has been verified with automated test suites.

169

Unit & Integration Tests

100% pass rate in Vitest

Covers state machines, money math, evidence persistence, tools

25 / 25

Golden Scenarios

100% Benchmark Score

Tested across clean delivery, rate mismatches, complex schemes

\$150+

API Credits Consumed

Exhaustive Evaluation

Extensively benchmarked with multimodal OCR and agent loops

0 PAISE

Financial Drift

100% Precision

Eliminates AI arithmetic hallucinations with integer paise math

EVALUATION SCENARIO COVERAGE

Clean Delivery	Stock arrived matches invoice and WhatsApp scheme	No claim created · marked clean	PASSED ✓
Short Delivery	50 boxes billed, 48 unloaded from delivery truck	₹882 shortage claim prepared	PASSED ✓
Rate Mismatch	WhatsApp agreed ₹428, invoice printed ₹441	₹598 rate variance claim prepared	PASSED ✓
Missing Free Units	Promised '10+1 free boxes', 0 free units shipped	₹856 scheme compensation claimed	PASSED ✓
Persistent Credit	Supplier promised future credit; verified against next bill	Open obligation closed on credit note	PASSED ✓

From Payment Collection to Margin Protection.

How ClaimBack scales across 15M+ small businesses via existing retail distribution channels.

PAYTM MERCHANT APP

Existing Counter Screen

- **Native Surface**

Merchants already open Paytm 30+ times daily to verify customer UPI payments.

- **Receiving Lens**

ClaimBack embeds directly into the Paytm for Business app as the camera scanner.

- **Zero Behavior Change**

Merchants don't need new hardware; they simply snap incoming supplier invoices.

COUNTER SOUNDBOX

Proactive Voice Reminders

- **Familiar Hardware**

Paytm Soundbox sits on 10M+ Indian merchant shop checkout counters.

- **Audio Recovery Alert**

Plays audio alert: 'ClaimBack reminder: ₹3,218 credit pending from Rama Traders.'

- **High Compliance**

Distributor delivery drivers immediately acknowledge the verbal counter alert.

MASSIVE BUSINESS ROI

High-Margin SaaS Economics

- **The Opportunity**

15 Million+ retail stores in India lose ₹15,000–₹45,000 monthly in supplier leakage.

- **Immediate Payback**

ClaimBack costs ₹999/month and recovers ₹10,000+ on Day 1. Unstoppable 10x ROI.

- **Stickiness**

The persistent obligation ledger creates immense retention: merchants never leave.

THE STRATEGIC THESIS

Payment collection is a commodity. Margin protection is high-retention SaaS.

Expanding payment providers into procurement margin protection transforms them from simple utilities into irreplaceable retail operating systems.

THE BOTTOMLINE

Your Margin. Protected.

ClaimBack gives 15 Million small merchants the procurement power of large enterprise retail chains.

01 • RECONSTRUCT 3 TRUTHS

Cross-Examines Reality

Bridges the gap between informal WhatsApp deals, messy paper invoices, and receiving counts. Zero blind spots.

02 • PERSISTENT CREDIT MEMORY

Never Forgets a Promise

Keeps recovery obligations open until verified on a future credit note or replacement. Ends the 'next bill' trap.

03 • PURE NET MARGIN ADDITION

Direct Bottom-Line ROI

Every rupee recovered goes straight into merchant net profit. 100% mathematically verified in integer paise.

TRY THE LIVE WORKING PROTOTYPE

claimback.claimback-app.workers.dev

Built with Next.js App Router, Supabase Postgres & Storage, OpenAI GPT-6.1, Codex, Sarvam AI & Google Antigravity.

169 passing tests · 25/25 golden scenarios evaluated · 0 paise drift · Production deployment live
